Professional Summary

Backend-focused software developer with proven ability to design, build, and deploy full-stack applications in production environments. Computer Science graduate (LASU, 4.16 CGPA) experienced in Python (FastAPI), Node.js, and PHP with demonstrated expertise in REST API design, database architecture, and cloud deployment. Currently expanding capabilities in AI integration and modern development tools (Claude API, LLM workflows). Seeks backend or full-stack roles where I can contribute to scalable system design and apply emerging AI/automation techniques to improve developer efficiency.

Technical Skills

Backend Development: Python (FastAPI, request handling, async programming), PHP, Node.js, REST API design and implementation

Databases & Data: MySQL database design, schema optimization, relational query writing

Frontend: HTML5, CSS3, JavaScript (DOM manipulation, event handling, async operations)

DevOps & Tools: Git/GitHub version control, application deployment (Render), environment configuration, API testing

Project Experience

HomeEase — Household Service Booking Platform

Tech: Node.js, Express, MySQL, HTML/CSS, JavaScript | Live: homeease-client.onrender.com

- Designed and implemented a full-stack platform connecting household service providers with customers across Lagos, handling provider-customer matching, real-time service listings, and transactional workflows.
- Built RESTful backend API endpoints for user authentication, booking management, and provider profile management; structured MySQL schema to support normalized data relationships and query efficiency.
- Deployed live production version on Render with automated CI/CD pipeline; platform currently live and testable at homeease-client.onrender.com.
- Implemented user-facing features including secure login, service search/filtering, booking confirmation, and provider dashboard—demonstrating full ownership of feature design through deployment.
- Debugged and optimized database queries to reduce latency; implemented session management and input validation for production-grade security.

TechConnect — Tutor-Student Matching Application

Tech: Python, Flask, MySQL, HTML/CSS, JavaScript

- Developed a web application for matching tutors with students across Lagos State; took full ownership of feature development from requirements to deployment.

- Architected user account system (tutor and student roles), search/matching algorithm for available tutors, and profile management endpoints using Python and MySQL.
- Demonstrated ability to ship features under workplace deadlines and collaborate with supervision—key learning experience in professional development workflows.

Education

Bachelor of Science, Computer Science | Lagos State University (LASU)

Graduated 2026 | CGPA: 4.16 | Second Class Upper Division | Relevant Coursework: Programming Language Principles, Computer Networks & Communication

Leadership & Community Impact

- Spearheaded digital transformation initiative in department through implementation of e-voting system; took on key roles as Clerk and Deputy Speaker during rollout, demonstrating technical leadership and change management.
- Collaborated with Speaker to organize school tech conferences; demonstrated ability to coordinate complex initiatives, engage diverse audiences, and build community around technology.
- Held multiple leadership positions: Speaker, Deputy Speaker, Honourable Member, Clerk, Secretary—showing sustained commitment to departmental governance, collaboration, and institutional development.

Professional Certifications & Training

AI & LLM Integration (Anthropic)

- Building with the Claude API — hands-on experience integrating large language models into applications
- Claude Code 101 & Claude Code in Action — AI-assisted development workflows and code generation
- Claude Platform 101 — understanding Claude as a development platform
- Claude Cowork Introduction — collaborative AI-powered development tools
- AI Fluency Framework & Foundations, AI Fluency for Students & Educators — comprehensive understanding of AI principles and applications
- Model Context Protocol: Advanced Topics & Introduction — building systems with tool-use and LLM integration

Cybersecurity Fundamentals — Webwise Academy

Key Strengths

- Full-stack ownership: comfortable designing systems end-to-end from API to database to frontend; proven via deployed production applications
- Leadership & collaboration: demonstrated ability to drive technical initiatives (e-voting system implementation), organize complex community events (tech conferences), and work effectively in team settings while maintaining technical excellence
- Backend-first mindset: prioritize scalable architecture, efficient queries, and robust API design over UI complexity
- Emerging tech adoption: proactive learning of AI/LLM tools (Claude ecosystem) showing interest in next-generation development patterns

- Self-directed: shipped real-world applications independently; comfortable working with minimal guidance
- Technical communication: articulate about system design choices and can explain architectural decisions clearly
